Past performance may not be indicative of future results. All investment strategies have the potential for profit or loss. Changes in investment strategies, contributions or withdrawals, and economic conditions may materially alter the performance your portfolio. Asset allocation and diversification do not assure or guarantee better performance and cannot eliminate the risk of investment losses. Returns reflect the reinvestment of dividends and capital gains. They do not represent the performance achieved by the Advisory Group or any of its clients. This chart should not be viewed as personalized investment advice or as an offer to buy or sell, or a solicitation of any offer to buy or sell the securities mentioned. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment or strategy will be suitable or profitable for a client's portfolio. Historical performance results for investment indices and/or categories, generally do not reflect the deduction of transaction and/or custodial charges or the deduction of an investment advisory fee, the incurrance of which would have the effect of decreasing historical performance results. There can be no assurances that a portfolio will match or outperform any particular benchmark. The "60/40 Global Equity/Fixed Income" benchmark represents a blend of 60% MSCI All Country World Equity Index and 40% Barclays Aggregate Bond Index.
